ABSTRACT

This collection of search formulations was assembled to assist in Dialog Searching of the ERIC data base. The formulations represent modular building blocks or concepts that occur frequently when searching this file. They have been formulated and described in such a way that they can be used as given, or they can be modified to suit specific needs. For the most part, the terms were selected with high recall as the goal. The formulations have been grouped into five major sections: (1) school grade level; (2) population groups; (3) types of libraries; (4) geographic areas; and (5) other topics. Posting counts are given to indicate the relative contribution of each of the terms in the formulation. The approximate processing time and cost for execution of a search/save is also included for each formulation. (Author)

I. INTRODUCTION

This collection of search formulations was assembled to assist in DIALOG searching of the ERIC data base. The formulations represent modular building blocks or concepts that occur frequently when searching this file. They have been formulated and described in such a way that they can be used as given, or they can be modified to suit specific needs. For the most part, the terms were selected with high recall as the goal. They could be used on other files, but they have been designed with the ERIC file as the main objective.

The formulations have been grouped into the following major sections:

1. school grade level
2. population groups
3. types of libraries
4. geographic areas
5. other topics

The posting count was current at the time that this collection was issued, but of course it is now out of date. However, the postings information will give you an indication of the relative contribution of each of the terms in the formulation in the event that you want to delete them for your own use.

The formulations have been restricted to terms that have some postings in the file. That is, no search terms are included that have no postings now, but might in the future. It is possible that some key terms have been overlooked. The user is invited to add to the formulations wherever desired.

The search terms are annotated to show the Descriptors and Identifiers that are included in the formulation, according to the Thesaurus of ERIC Descriptors, 6th edition (1975), and the ERIC Identifier Usage Report (1974).

The approximate processing time and cost for execution of a Search/Save is included for each formulation. When more than one time was available, the second highest time is given.
